## Don't smoke

Smoking tobacco causes NCDs such as lung disease, heart disease and stroke. Tobacco kills not only the direct smokers but even non-smokers through second-hand exposure. Currently, there are around 15.9 million Filipino adults who smoke tobacco but 7 in 10 smokers are interested or plan to quit.

If you are currently a smoker, it's not too late to quit. Once you do, you will experience immediate and long-term health benefits. If you are not a smoker, that's great! Do not start smoking and fight for your right to breathe tobacco-smoke-free air.

Gurupriya Vision Research Foundation, the public charitable trust of Radhatri Nethralaya tertiary eye care hospital, Chennai, was awarded the tenth edition of the prestigious HCL Tech grant this year, for its Project Vision on Wheels: the rural teleophthalmology project, which screens for blinding conditions in preterm babies in villages. Gurupriya Vision Research Foundation won the award, among 1300 applications from all over India in the category of Health. Dr. Vasumathy Vedantham, Managing trustee, Dr. Praveen Krishna, Trustee GVRF and Medical Director, Radhatri Nethralaya said, that the project Vision on Wheels, screened the preterm babies of underprivileged parents for the blinding condition called Retinopathy of Prematurity (ROP) from the villages in rural Tamilnadu and Andhra Pradesh and any baby found to have ROP was immediately transported to Radhatri Nethralaya for free vision preserving treatment. Our team travels even upto 365

kms from Chennai to screen the babies in villages, he said. Dr. Vasumathy Vedantham, Managing Trustee GVRF and Medical Director, Radhatri Nethralaya, said that ROP was the commonest cause of childhood blindness in middle income countries such as India. With only 150 pediatric retina specialists in India, and ROP being a predominantly rural problem, interventions like teleophthalmology and hand-held retinal cameras to screen all babies in villages were needed. Project Vision on Wheels, is our signature free rural teleophthalmology project, through which more than 1 lakh 50,000 babies have been screened in rural Tamilnadu and Andhra Pradesh by our technicians whom we fondly refer to as our seven women warriors and more than 5000 babies prevented from blindness by timely laser, injections and vitrectomy surgeries under general anaesthesia, she added.

## Consume less salt and sugar

Filipinos consume twice the recommended amount of sodium, putting them at risk of high blood pressure, which in turn increases the risk of heart disease and stroke. Most people get their sodium through salt. Reduce your salt intake to 5g per day, equivalent to about one teaspoon. It's easier to do this by limiting the amount of salt, soy sauce, fish sauce and other high-

sodium condiments when preparing meals; removing salt, seasonings and condiments from your meal table; avoiding salty snacks; and choosing low-sodium products.

On the other hand, consuming excessive amounts of sugars increases the risk of tooth decay and unhealthy weight gain. In both adults and children, the intake of free sugars should be

reduced to less than 10% of total energy intake.

This is equivalent to 50g or about 12 teaspoons for an adult. WHO recommends consuming less than 5% of total energy intake for additional health benefits. You can reduce your sugar intake by limiting the consumption of sugary snacks, candies and sugar-sweetened beverages.
